2 – 4 operators .

B&B, en-suite 1x twin room. Number of nights depends on distance from home and time of year. Minimum 2 nights.

Own transport, so no van hire required.

Travel expenses by arrangement.

It is a single ended switching layout, making use of a "sector plate" to transfer between tracks with the fiddle yard to the rear. Control is by DCC with most locos sound fitted. I can operate from the front or rear dependent upon space available.

The scene is set for early 60s through to mid/late 70s. The short line "Lyttelton and Western", operate both steam and diesel locomotives. Various freight car types are used, with a variety of road names, most are weathered to operating condition.

As the title implies, this layout is constructed from mostly "recycled" material, from the timber legs and plywood base, to the buildings and track, (naturally weathered in the garden), most of the stock has been bought 2nd hand and certainly used on my previous layout.

Built to a height that is easy viewing, for children and wheelchair users. .
